

Windows 10 May 2019 Update (version 1903) comes with a sandbox. But this sandbox fails for many users with error 0x80070002 (a file could not be found).

Windows Sandbox is part of Windows 10 Pro and Enterprise and may be installed as a feature.

It has been an observation since April 2019 in Insider Preview builds, that the Windows Sandbox is broken. If foreign language packs are installed, Windows Sandbox terminates with error code 0x80070002 (ERROR_FILE_NOT_FOUND')
